#### **DETAILED ACTION**

#### Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - Claims 1-7, drawn to a cleaning liquid, classified in class 510, subclass
     175.
  - II. Claim 8, drawn to a process for treating a substrate, classified in class134, subclass 1.3.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process could be used with a wide variety of cleaning liquids.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- During a telephone conversation with Matt Jacob on March 12, 2005, a
   provisional election was made with traverse to prosecute the invention of group I, claims
   1-7. Affirmation of this election must be made by applicant in replying to this Office

Art Unit: 1751

action. Claim 8 is withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

## Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Skee, US 6.465.403.

Skee teaches a composition for cleaning micrelectronic substrates comprising 5.1% tetramethylammonium hydroxide, 52% dimethyl sulfoxide, and 38.7% water (col. 33, example 18). As this reference meets all material limitations of the claims at hand, the reference is anticipatory.

7. Claims 1-5 are rejected under 35 U.S.C. 102(a) as being anticipated by Peyne et al, US 6,417,112.

Peyne et al teach a cleaning composition for a dual damascene system (see abstract). An example of such a composition comprises 2.3% trimethyl hydroxyethyl ammonium hydroxide, 47.7% water, and 50% dimethyl sulfoxide (col. 16, example D4). As this reference meets all material limitations of the claims at hand, the reference is anticipatory.

Application/Control Number: 10/657,177 Page 4

Art Unit: 1751

8. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Hara et al, US 6,797,682.

Hara et al teach a resist stripper comprising 20% trimethyl hydroxyethyl ammonium hydroxide, 50% N-methyl pyrrolidone, and 25% water (col. 7, example 19). Another example comprises 14% tetramethylammonium hydroxide, 11% dimethyl sulfoxide, and 70% water (col. 6, example 3). As this reference meets all material limitations of the claims at hand, the reference is anticipatory.

### Claim Rejections - 35 USC § 103

- 9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 10. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hara et al, US 6,797,682.

Hara et al are relied upon as set forth above. With respect to claim 7, note that mixtures of quaternary ammonium compounds may be used (col. 2-3, lines 67-1). With respect to claim 6, the proportions taught by the reference overlap those presently claimed (col. 4, lines 20-35). Accordingly, it would have been obvious to one of ordinary

Application/Control Number: 10/657,177 Page 5

**Art Unit: 1751** 

skill in the art to formulate a stripping composition comprising the components and proportions of components presently claimed based on the teachings of the reference.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles I. Boyer whose telephone number is 571 272 1311. The examiner can normally be reached on M-F 9:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yogendra Gupta can be reached on 571 272 1316. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
